## PROFILE SUMMARY

Computer and Software Engineering graduate with 3+ years of combined hands-on experience in ICT infrastructure, network cabling, virtualization, and system administration of web-based platforms. Skilled in installing and configuring operating systems and applications, managing user accounts and role-based permissions, deploying and maintaining production systems, and troubleshooting application, database, and network issues. Experienced in supporting and maintaining web-based business platforms, databases, and cloud deployments. Trained in Windows Server administration (Active Directory, Group Policy, DHCP, DNS) and network configuration (VLANs, firewalls). Strong documentation and user-training abilities, with a commitment to delivering stable, secure, and efficient IT systems.

## SKILLS

- **System Administration:** Windows Server, Active Directory, Group Policy, DHCP, DNS (university system administration training), OS installation and configuration, VMware virtualization, user account management, role-based access control, platform hosting and maintenance, technical documentation
- **Network Maintenance:** LAN/WAN configuration, VLANs, firewall configuration and intrusion detection basics (networking course workshops), Cisco Packet Tracer, routing and switching, TCP/IP configuration and troubleshooting
- **Hardware & Infrastructure:** Network cabling, RJ45 termination, patch panels, server rack assembly, CCTV installation, basic fiber-optic connections, ESP32 and sensor hardware
- **Electrical Safety:** Safe wiring and power supply handling for IoT and ESP32 hardware, safe work with powered components and sensors, basic hazard awareness when installing IT equipment

- **Business Applications:** Odoo ERP (self-directed hands-on practice), user and access management, feature and workflow configuration, user support and training, application troubleshooting
- **Business Continuity:** Containerized, reproducible environments (Docker Compose, persistent storage, health checks)
- **Troubleshooting:** Root-cause analysis, authentication, API, database, and connectivity issue resolution
- **Safety & Compliance:** Electrical safety checks, system audits, regulatory compliance.
- **Software & Databases:** TypeScript, JavaScript, Node.js, NestJS, React, Python, REST APIs, PostgreSQL, MySQL, SQL
- **Deployment & Tools:** Docker, Render, Vercel, Netlify, Neon, Git, GitHub, Postman, Microsoft Office, Google Workspace

## EXPERIENCE

**Binary Hub, Kigali, Full-Stack Developer & Platform Administrator** *2026*

- Managed the Bwenge e-learning platform end to end: development, deployment, user administration, and maintenance
- Administered user accounts and role-based permissions for students, instructors, and administrators
- Designed and managed the PostgreSQL database for users, courses, enrollments, and results
- Configured features and workflows based on user and organizational requirements
- Troubleshot application, database, API, and deployment issues to keep the platform available
- Maintained technical documentation and supported users

**Hello Hub Technology, Kigali, Full-Stack Developer** *2026*

- Designed and developed PulseDrop, a last-mile delivery platform with a Node.js/TypeScript microservices backend
- Built the data layer with PostgreSQL/PostGIS, Redis caching, and RabbitMQ messaging
- Containerized the full environment with Docker Compose for consistent deployment across services

**Gingo Tech, Cameroon, Software Developer** *2025*

- Supported development, configuration, and troubleshooting of the RWF Miner platform
- Implemented Stripe payment workflows and backend services
- Supported production deployments on Vercel, Render, Neon, and Docker
- Resolved authentication, API, database, and platform issues
- System security and maintenance

**Vision Technologies Company Ltd, CHUK Hospital, Kigali, Industrial Attachment, IT & CCTV Installation** *2025*

- Surveyed sites and planned camera, cable, and equipment placement
- Installed network cabling, terminated RJ45 cables and patch panels, and assembled server racks
- Gained hands-on experience with basic fiber-optic connections

**kLab, Kigali, Trainee, Full-Stack Developer** *2026*

- Completed hands-on technology training with mentors on practical team projects
- Worked with version control, databases, APIs, and application configuration

**Independent Software & Web Developer, Kigali** *2021 to Present*

- Develop, configure, deploy, and maintain web applications
- Troubleshoot application, database, authentication, and deployment issues
- Shared technical knowledge through training sessions and public talks

## ACHIEVEMENTS

**System Support & Administration**

- Managed the full Bwenge platform for Binary Hub, covering hosting, user administration, and maintenance
- Deployed and maintained production applications on Docker, Render, Vercel, and Neon
- Managed role-based access for three user types (students, instructors, administrators)

**Database & Software Engineering**

- Designed and managed databases using PostgreSQL (with PostGIS), MySQL, and Firebase
- Developed full-stack applications with REST APIs, microservices, and payment integration
- Built systems for e-learning, delivery logistics, inventory, e-commerce, personal finance, and user management
- Implemented payment integration on the RWF Miner and e-commerce platforms

**Networking & Infrastructure**

- Designed and simulated enterprise network topologies in Cisco Packet Tracer (routing, switching, TCP/IP, network security basics)
- Installed and configured operating systems on VMware virtual machines, including network setup and performance monitoring
- Configured Windows Server services in system administration labs: Active Directory, Group Policy, DHCP, and DNS
- Configured VLANs, LAN/WAN links, and firewall rules in networking course workshops
- Containerized multi-service environments with Docker Compose, configuring networking, health checks, and persistent storage
- Worked with electrical connections, power supplies, and powered components across multiple IoT projects, following safe handling practices
- Completed multiple practical lab projects under the Cisco Networking Academy curriculum

## EDUCATION & CERTIFICATIONS

**Education**

- BSc in Computer and Software Engineering, University of Rwanda, College of Science & Technology
- Coursework: Networking & Communications, System Administration, Database Systems, IoT Systems, Software Engineering, Web Technologies
- Practical training: Windows Server, Active Directory, Group Policy, DHCP, DNS; networking workshops on VLANs, firewalls, and routing and switching
- Advanced Secondary Diploma in Mathematics, Computer Science and Economics, Collège Don Bosco Rushaki (2018 to 2021)

## Professional Certifications & Training

- Full-Stack Development, kLab Academy
- IT Essentials & Cybersecurity, Cisco Networking Academy
- Introduction to Networks & Networking Basics, Cisco Networking Academy
- Routing & Switching coursework (CCNA curriculum), Cisco Networking Academy
- JavaScript Algorithms & Data Structures; Responsive Web Design, freeCodeCamp
- Virtual Assistant & AI Career Essentials
- Cybersecurity Fundamentals, Cisco Networking Academy

## COMPLETED PROJECTS

- **Bwenge E-Learning Platform (Binary Hub):** courses, enrollments, roles and permissions, PostgreSQL, deployment, full administration
- **RWF Miner (Gingo Tech):** production deployment, authentication, Stripe payments, PostgreSQL
- **PulseDrop (Hello Hub):** last-mile delivery platform with microservices, PostGIS, Redis, RabbitMQ
- **E-Commerce Platform:** product management, user authentication, order processing, payment integration
- **Personal Finance Tracker:** income and expense tracking with financial reports
- **Odoo ERP Practice (self-directed):** installed Odoo with Docker and PostgreSQL; configured users and access rights, custom fields, workflows, and reports; wrote a user guide
- **Staff Management App:** user management system with roles and permissions
- **SmartStock System:** inventory management web application with MySQL
- **Smart Safety Helmet:** ESP32 and sensor-based IoT hardware project, including wiring and power supply
- **Smart Irrigation and IoT Dashboard:** sensor monitoring with a real-time React/MQTT interface
- **Business Finder App:** mobile application built with Dart/Flutter
